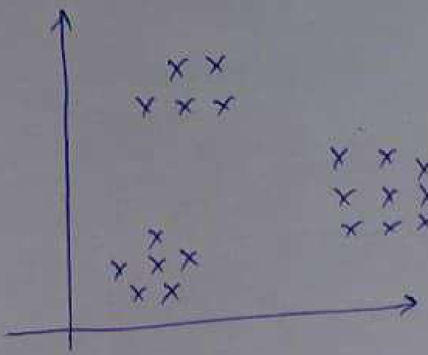
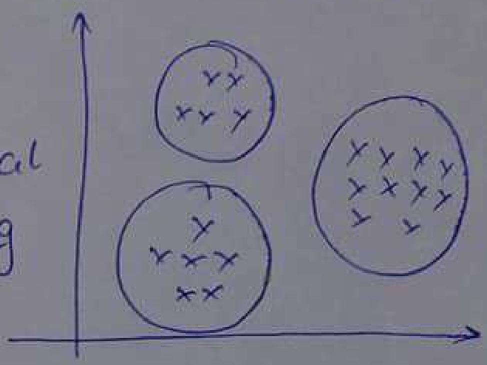
Hierarchical Clustering

K = 3 No centroids

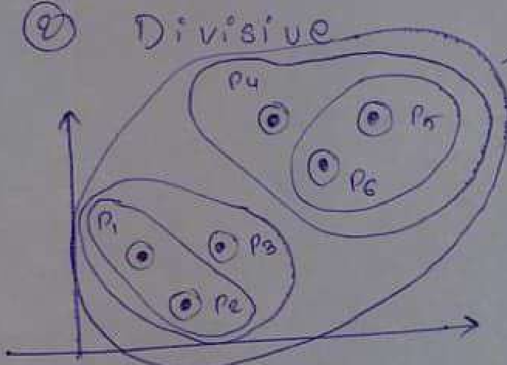


=> Hierarchical clustering



HC

① Agglomerative
② Divisive } => Geometric Intuition



Steps

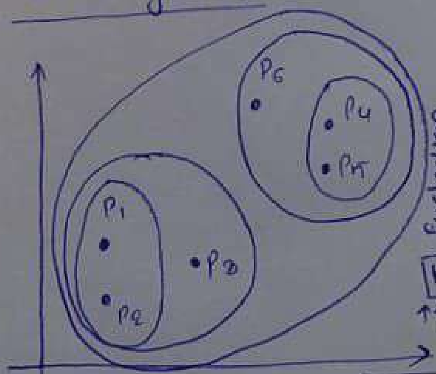
① For each point initially will consider it as a seperate cluster.

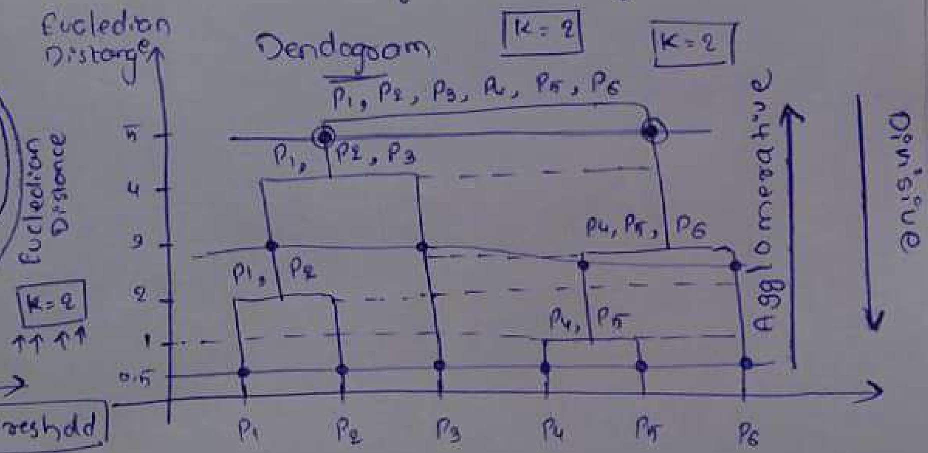
② Find the nearest point and create a new cluster.

③ Keep on doing the same process until we get a single cluster

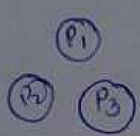
Dendogram

No. of clusters





Threshold



K = 4 K = 6

(*) Select the longest vertical line such that no horizontal line pass through it } Threshold { Eucledian Distance
