

Post Pruning And Pre Pruning
(Decision Tree)

Training dataset

- max feature
- max depth
- split

Punning

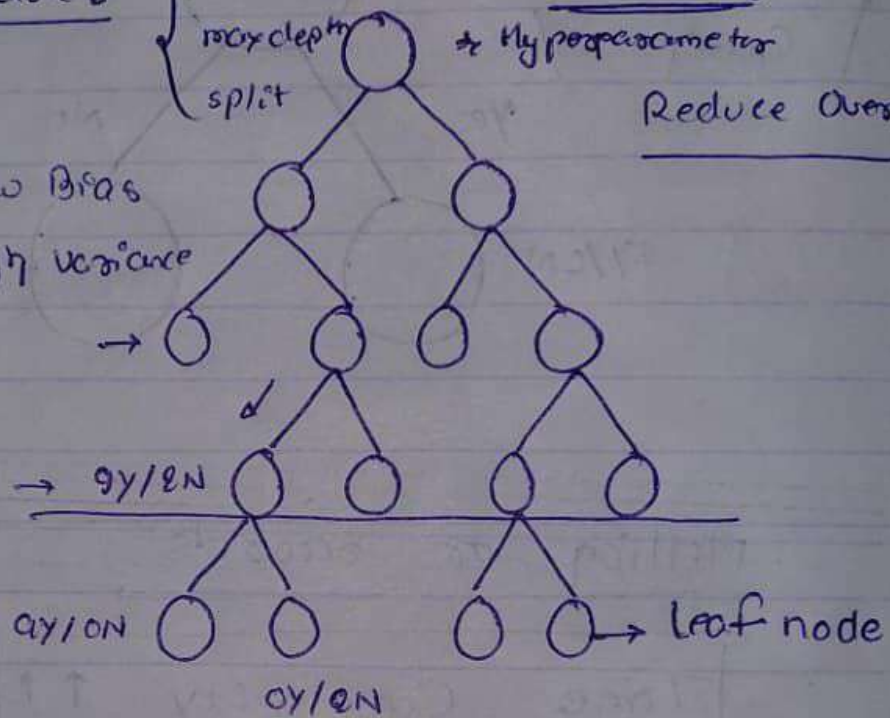

→ Hypothesometer

Reduce Overfitting

Overfitting $\rightarrow$ low Bias
High variance

Тоқсін ACC ↑

Test ACC ↓

Post Pruning →

- 1) Construct the DT
- 2) Prune it with respect to depth
- 3) Smaller datasets ←

Poe Punning: My perparameter Tuning
while constructing DT

SK Leq on

max_depth = 3 , max_feature
