Tokenization In NLP

- Tokenization is a process of converting either a paragraph or a sentences on to tokens.
- converting paragraph on to words or sentences
- single single words or paragraph become a token.

Topics

1) Corpus → Paragraph
2) Documents → Sentences
3) Vocabulary → Unique words
4) Words → All the word present in corpus

Tokenization

corpus { "My name is KRISH and I have a interest in teaching ML, NLP and DL. I am also a Youtuber".

⇓

Tokens { sentences }

↓

Tokenization ⇐ words

① My name is KRISH and I have interest in teaching ML, NLP and DL

Token ② I am also a Youtuber.

[I like drink Apple Juice. My friends like Mango Juice]
