Advantages and Disadvantages of BOW

Advantages

1. Simple and Intuitive
2. fixed size i/p → ML Algorithms

Disadvantages

1. Sparse matrix or array → overfitting
2. Ordering of the word is getting changed
3. Out of Vocabulary (OOV)
4. Semantic meaning is still not captured.

Note:

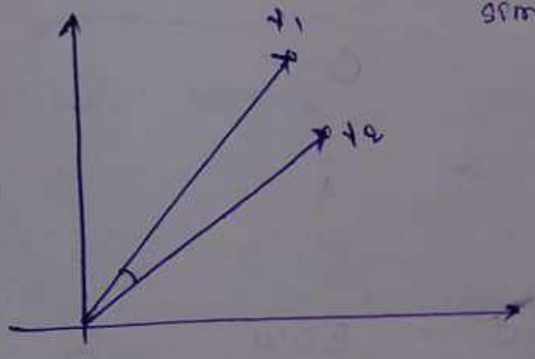

So → Boy girl good [school] → Test

So, it ignore the word "school" because it's not present during training.

So, it can't predict

The food is good → [1 1 1 0 1] → V_1

The food is not good → [1 1 1 0 1] → V_2

similar

Note:

The angle between V1 and V2 is very less so it will consider as similar sentense but actually both are different.
