

SVM KERNELS

Linear SVC

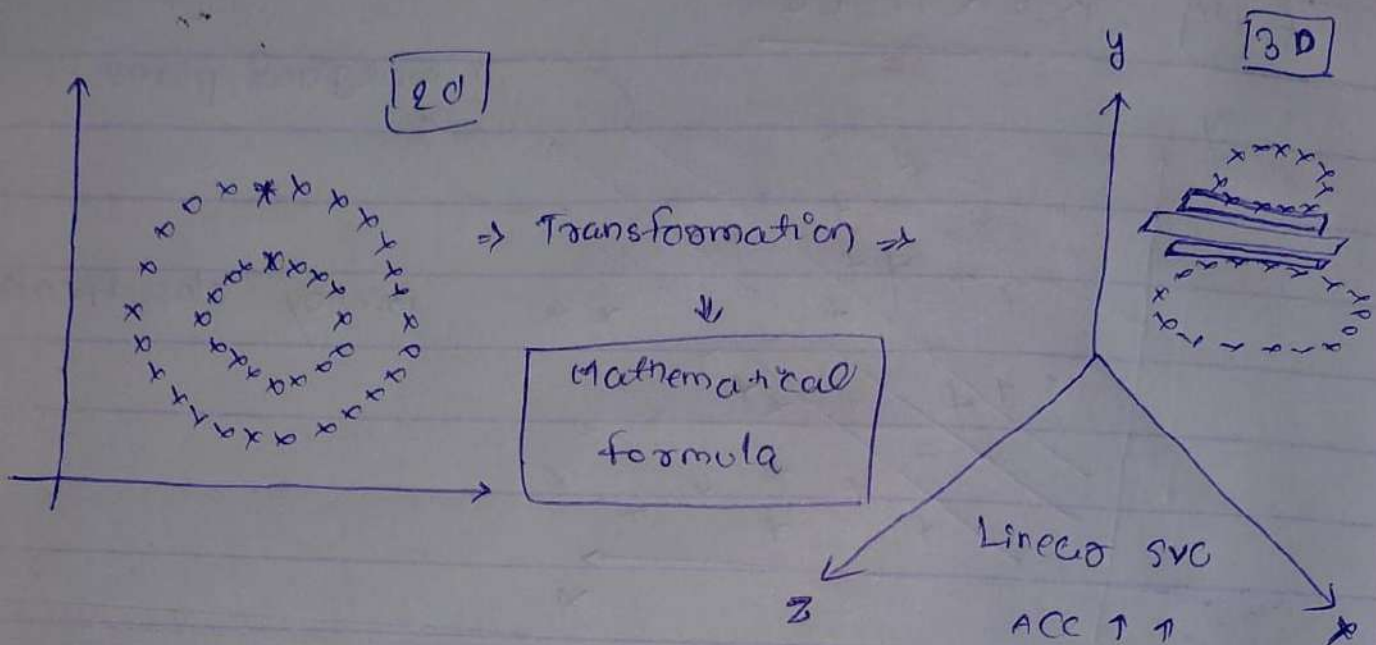

Linear SVC

Acc ↓↓

85

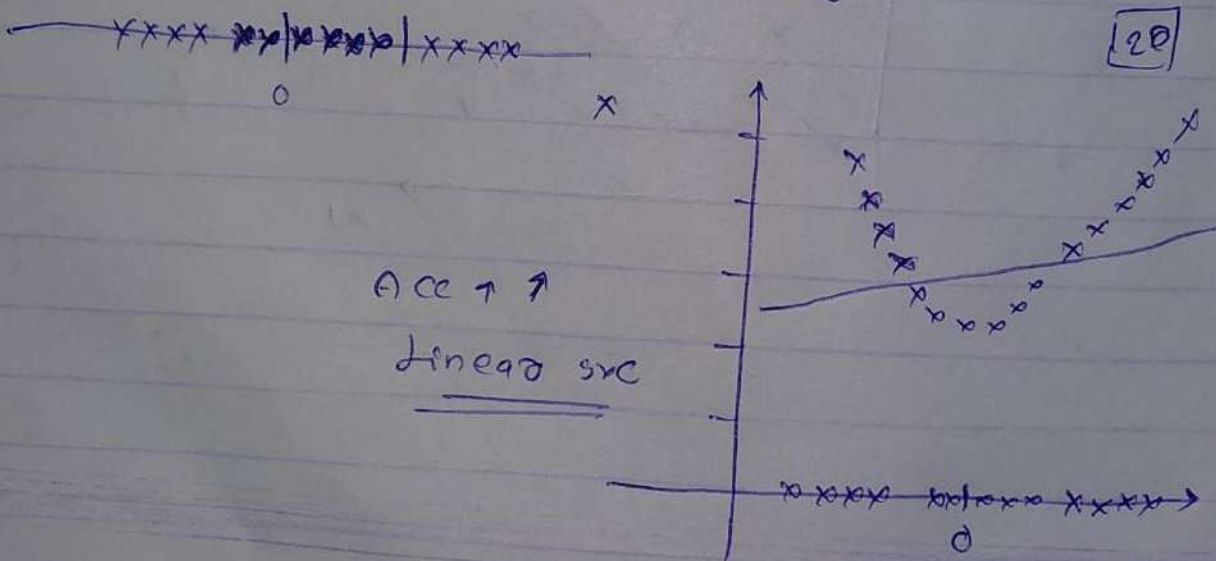

SVM $\Downarrow$ Kernels

Dataset :- 1D

SVC Linear SVC $\Rightarrow$ Transformation

$y = x^2$

SVM Kernel

Types:

76

- 1) Polynomial Kernel
- 2) RBF Kernel
- 3) Sigmoid Kernel

NOTE:

Using Linear SVC we can't solve the 1D problem.

* what are the transformation formula is basically applied to create new dimension is known as SVM kernel.
